

Symmetrical Chess Collection

Zillions User Interface

The game rules file "collect.zrf" within the "rules" sub-directory can conveniently enable the selection between all of the 45 individual games within this collection. Moreso, if it is renamed "select.zrf".

A universal user interface for choosing amongst games, instead of the standard Zillions user interface offering only traditional, popular games, is available upon the Zillions web site for free download. Entitled "select by group", it was advented by Ken Franklin.
